

ACZ Laboratories, Inc.

A Full Service Environmental Testing Laboratory

Low Level Mercury Analysis EPA 1631e CVAFS

ACZ has a long standing reputation as one of the top laboratories in the United States for low-level metals analysis, including mercury. ACZ has the experienced staff, Class 100 Cleanroom and instrumentation to produce the highest quality ultra low-level mercury data available via EPA Method 1631e in water matrices.

Class 100 Cleanroom:

Many permits and regulatory agencies require an ultra low-level detection limit for Mercury. Due to those standards, ACZ performs all 1631e sample preparation in our Class 100 Cleanroom to significantly reduce any possibility of contamination from outside elements.

Field Transfer Blank and Sample Bottles:

All sampling events for mercury 1631e require a field transfer blank to ensure that no ambient contamination occurs during field sampling. ACZ's 1631e bottle kits are prepared in our Class 100 Cleanroom, double bagged and include the required field transfer blank 1600 series pre-cleaned bottles and HCL preservative vials.

About ACZ

ACZ is NELAP accredited and holds certifications in most western states. ACZ's 31,000 sq. ft. state-of-the-art facilities and experienced staff ensure the support of large projects, while still providing superior personalized customer service.

ACZ provides our clients high quality data in a timely manner. A commitment to quality and extensive experience make ACZ the right choice for your analytical service needs.
